Burnside SA vet announced as part of unique trace mineral challenge

Burnside veterinarian Colin Trengove has been announced as part of a panel of six eminent Australian beef, dairy and sheep experts who will mentor farmers in a new and unique challenge.

The *Multimin Performance Ready Challenge* will see each of these industry leaders teamed up with an Australian farmer to provide specialist on-farm mentoring around the use of *Multimin* trace mineral injections for beef, dairy and sheep.

Dr Trengove is a highly qualified vet with interests in farm nutrition, management and animal health. He is a co-founder of the Australian Precision Ag Laboratory (APAL) in Adelaide which provides a soil, plant tissue and water testing service to South Australia.

Working as the Managing Director at Pro Ag Consulting, Dr Trengove is also a lecturer in small ruminant medicine at the School of Animal and Veterinary Sciences, University of Adelaide, Roseworthy.

The *Multimin Performance Ready Challenge* is the latest national marketing campaign from Virbac Australia that will see up to seven Australian farmers receive 12 months free use of *Multimin* and the chance to share in prizes valued at over \$31,000.

Dr Jerry Liu, Livestock Nutrition Product Manager at Virbac Australia said that this is an extraordinary opportunity for farmers to have some of the best animal nutrition and animal health advice on their property.

“Trace minerals are essential elements for healthy sheep and cattle. We know that during high demand periods such as joining, weaning and birthing, animals have higher requirements for certain trace minerals.”

“*Multimin* injections are designed as a trace mineral top-up to improve the performance of cattle and sheep when they need it most.”

“The vets involved in the Challenge are pivotal to its success - they will play a major role in educating farmers in the use of *Multimin* to improve animal fertility and health and ultimately the farm’s financial bottom line.”

“Dr Trengove will offer a wealth of experience and knowledge to the challenge. His experience in whole farm nutrition focused on soil, plant and animal interaction in livestock production, health and management will be invaluable to our southern challenger,” he said.

Dr Trengove said he is looking forward to working with the South Australian challenger to improve the performance of their livestock.

“The *Multimin Performance Ready Challenge* offers a great opportunity for me as a mentor to work closely with a producer to carefully evaluate the benefit of using *Multimin* trace mineral injections to

address trace element deficiencies in a controlled farm study. This will avoid the mystery that often arises from inappropriate use of products in poorly designed farm-based observations.”

The challenge will be followed world-wide via social media with challengers providing regular updates, blogs and videos of their progress.

At the end of the 12-month challenge period, the mentors will shortlist the top performing challengers and voting will open to the public to select an overall winner.

The most successful challenger will win an overseas experience of a lifetime for two and free *Multimin* for an additional 12 months. First prize is valued at more than \$21,000 and will offer professional development tailored to the winning challenger and their farm. Second and third prize challengers will receive a further six months free *Multimin* valued at over \$5,000 each.

Entries close on January 31st for the *Multimin Performance Ready Challenge*. Farmers are encouraged to take a look at the website and enter.
