Monday, 22 January 2018

### **Esperance WA vet announced as part of unique trace mineral challenge**

Esperance veterinarian Enoch Bergman has been announced as part of a panel of six eminent Australian beef, dairy and sheep experts who will mentor farmers in a new and unique challenge.

The *Multimin Performance Ready Challenge* will see each of these industry leaders teamed up with an Australian farmer to provide specialist on-farm mentoring around the use of *Multimin* trace mineral injections for beef, dairy and sheep.

From Colorado, USA Dr Bergman has been practicing vet in Esperance for 14 years. He has an interest in Bovine Viral Diarrhoea Virus (BVDV) and established Australia's first commercial laboratory for the diagnosis of animals Persistently Infected with BVDV.

Previously the president of the Australian Cattle Vets, Dr Bergman has sampled thousands of local animals for hundreds of clients attempting to benchmark their animal's micro mineral status to allow targeted supplementation.

The *Multimin Performance Ready Challenge* is the latest national marketing campaign from Virbac Australia that will see up to seven Australian farmers receive 12 months free use of *Multimin* and the chance to share in prizes valued at over \$31,000.

Dr Jerry Liu, Livestock Nutrition Product Manager at Virbac Australia said that this is an extraordinary opportunity for farmers to have some of the best animal nutrition and animal health advice on their property.

"Trace minerals are essential elements for healthy sheep and cattle. We know that during high demand periods such as joining, weaning and birthing, animals have higher requirements for certain trace minerals."

"*Multimin* injections are designed as a trace mineral top-up to improve the performance of cattle and sheep when they need it most."

"The vets involved in the Challenge are pivotal to its success - they will play a major role in educating farmers in the use of *Multimin* to improve animal fertility and health and ultimately the farm's financial bottom line."

"Dr Bergman will offer a wealth of experience and knowledge to the challenge. His experience in trace mineral supplementation and improving producer's profitability will be invaluable to our western challenger," he said.

Dr Bergman said he is looking forward to working with the Western Australian challenger to improve the performance of their livestock.

"Deficiencies of copper, cobalt, and/or selenium are exceptionally common in the Esperance area. I believe appropriate and timely micro mineral supplementation is a key production driver for WA

producers. I have seen first-hand some of the benefits that Multimin is delivering and am keen to work as a Multimin Performance Ready Challenge mentor to further document the value Multimin can deliver to Australian beef, sheep, and dairy producers.”

The challenge will be followed world-wide via social media with challengers providing regular updates, blogs and videos of their progress.

At the end of the 12-month challenge period, the mentors will shortlist the top performing challengers and voting will open to the public to select an overall winner.

The most successful challenger will win an overseas experience of a lifetime for two and free *Multimin* for an additional 12 months. First prize is valued at more than \$21,000 and will offer professional development tailored to the winning challenger and their farm. Second and third prize challengers will receive a further six months free *Multimin* valued at over \$5,000 each.

Entries close on January 31st for the *Multimin Performance Ready Challenge*. Farmers are encouraged to take a look at the website and enter.
