Smithton TAS vet announced as part of unique trace mineral challenge

Smithton veterinarian Craig Dwyer has been announced as part of a panel of six eminent Australian beef, dairy and sheep experts who will mentor farmers in a new and unique challenge.

The *Multimin Performance Ready Challenge* will see each of these industry leaders teamed up with an Australian farmer to provide specialist on-farm mentoring around the use of *Multimin* trace mineral injections for beef, dairy and sheep.

Dr Dwyer is a highly qualified vet acting as Clinic Lead for Tasmanian practices. He worked in dairy practice in Smithton before continuing his career in England and Wales and then moving back to Tasmania to become partner at Smithton Veterinary Service.

As current president of Australian Cattle Vets, Dr Dwyer has interests in cattle reproduction, bull fertility and nutrition.

The *Multimin Performance Ready Challenge* is the latest national marketing campaign from Virbac Australia that will see up to seven Australian farmers receive 12 months free use of *Multimin* and the chance to share in prizes valued at over \$31,000.

Dr Jerry Liu, Livestock Nutrition Product Manager at Virbac Australia said that this is an extraordinary opportunity for farmers to have some of the best animal nutrition and animal health advice on their property.

“Trace minerals are essential elements for healthy sheep and cattle. We know that during high demand periods such as joining, weaning and birthing, animals have higher requirements for certain trace minerals.”

“*Multimin* injections are designed as a trace mineral top-up to improve the performance of cattle and sheep when they need it most.”

“The vets involved in the Challenge are pivotal to its success - they will play a major role in educating farmers in the use of *Multimin* to improve animal fertility and health and ultimately the farm’s financial bottom line.”

“Dr Dwyer will offer a wealth of experience and knowledge to the challenge. His knowledge in ruminant nutrition and experience as Clinic Lead for Tasmanian practices will be invaluable to our state challenger,” he said.

Dr Dwyer said he is looking forward to working with the Tasmanian challenger to improve the performance of their livestock.

“I am really excited about being part of the Multimin Performance Ready Challenge, being able to work closely with a producer to improve the production, profitability and welfare on farm is what a large animal vet is all about. Using science to monitor data and ensure the correct results are gained for the animals and farm with regards to trace elements is best practice and a great opportunity given to farmers by Virbac. Given that other farmers can watch the progress and see the results is a bonus for all, let’s hope Tasmania can track really well and take home the major prize.”

The challenge will be followed world-wide via social media with challengers providing regular updates, blogs and videos of their progress.

At the end of the 12-month challenge period, the mentors will shortlist the top performing challengers and voting will open to the public to select an overall winner.

The most successful challenger will win an overseas experience of a lifetime for two and free *Multimin* for an additional 12 months. First prize is valued at more than \$21,000 and will offer professional development tailored to the winning challenger and their farm. Second and third prize challengers will receive a further six months free *Multimin* valued at over \$5,000 each.

Entries close on January 31st for the *Multimin Performance Ready Challenge*. Farmers are encouraged to take a look at the website and enter.
